	/Dave Czekaj/ Primary Examiner, Art Unit 2621

Continuation of 11. does NOT place the application in condition for allowance because: On page 2, applicant argues that the references fail to disclose taking two different control states in which a second control state causes a camera unit to move to have the micro-computer recovered from a frozen state. While the applicant's points are understood, the examiner respectfully disagrees. See for example Smith column 5, line 65 - column 6, line 5. There Smith discloses causing a camera to rotate to activate a reset line. Hence, the combination of Smith with Sergeant, Kawai, and Shibata teach the limitations as claimed. Therefore the rejection has been maintained. On page 2, applicant argues that the references cannot be combined to form the present invention. While the applicant's points are understood, the examiner respectfully disagrees. The examiner notes that all the references contain similar subject matter and are within the same field of endeavor. Further, all the elements are known, could have been combined without any change of function, and would give predictable results. Hence the combination is deemed proper. Therefore the rejection has been maintained.
